

Residential

TRAINING SERIES

Residential Applications

Course Description

This course is particularly useful for distributors, counter personnel, and contractors who are newly exposed to the Mitsubishi Electric Trane HVAC US M- and P-Series product lines. It is designed to increase product knowledge of the M- and P-Series product lines and improve the participant's ability to select the most appropriate applications for these products. The course will also provide participants with the tools to better service their customers.

Prerequisites

Distributors, Counter Personnel, and Contractors

Target Audience

Distributors, Counter Personnel, and Contractors

Course Duration

4 Hours

Educational Credits

IACET: 0.4 CEUs NATE: 4 hours

Course Tuition

No Charge

Classroom Requirements

Laptops are recommended

What You'll Learn

- Suggest the best equipment for various applications such as single-zone versus multi-zone, standard heat pumps versus Hyper-Heating, ducted indoor units versus wall-mount or other styles
- Based on a specific application, identify the proper components and accessories to correctly install a complete system
- Locate installation requirements such as maximum piping lengths, operating ranges, and power requirements
- Recognize the M- and P-Series product lines as a "first approach" rather than a "last resort" when it comes to replacement of existing systems and/or new construction
